Submitted (21-AUG-2002) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Aug 21, 2002 this sequence version replaced gi:17061665. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html

Center clone name: 248_E_1
Center clone: Summary Statistics
Sequencing vector: Plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Hig Dy: 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 194595 bases at least Q40

                                                                                                                                                                                                                                                                                                        repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence was generated from part of bacterial clone contigs human chromosome 6, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6 503N11 is from the library RPC13 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is the entire insert of clone 503N11. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            requests: clonerequest@sanger.ac.uk
On May 13, 1999 this sequence version replaced gi:4581366.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with conly a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (12-MAY-1999) Sanger Centre, Hinxton, Cambri

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB DB

Sequence 3, Application US/09813133A

Patent No. 6455294

GENERAL INFORMATION:
APPLICANT: GAN, Weiniu et al
TITLE OF INVENTION: ISOLATED HUMAN PROTEASE PROTITILE OF INVENTION: NUCLEIC ACID MOLECULES ENC.
TITLE OF INVENTION: USES THEREOF
FILE REFERENCE: CL001173

CURRENT APPLICATION NUMBER: US/09/813,133A

CURRENT TILING DATE: 2001-06-06
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                            밁

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB

Patent No. US20020068036A1

PATENT NEVERTION:
APPLICANT: Hevezi, Peter
APPLICANT: Mack, David
APPLICANT: Mack, David
APPLICANT: Milson, Keith E.
TITLE OF INVENTION: NOVEL METHODS OF DIAGNOSIS OF PROSTATE AND/OR BREAST CANCER.
TITLE OF INVENTION: NOVEL METHODS OF DIAGNOSIS OF PROSTATE CANCER.
TITLE OF INVENTION: MODULATORS
FILE REFERENCE: A-69199-1/DJB/JJD/AMS
CURRENT APPLICATION NUMBER: US/09/847,046

CURRENT FILING DATE: 2001-04-30
PRIOR APPLICATION NUMBER: US/09/733,288
PRIOR FILING DATE: 2000-12-08

PRIOR APPLICATION NUMBER: US/09/687,576
